Computer desktop nature wallpaper free

By Keith Evans Desktop computers brought computing power to small businesses and private homes. Although these machines multiplied in the 1980s and 1990s, they are the result of a long history of technological innovation. The development of desktopcomputers, according to the PC History organization, originated from the 1971 introduction of the microprocessor. By 1975, desktopcomputers appeared in Popular Electronics magazine, and Apple II made desktop computers available to home users in 1977. IBM Personal Computer, or PC, accelerated the spread in 1981, and the architecture of the PC set the standard for subsequent desktop computer generations. Desktops typically have a parent board, processor, random access memory (RAM), a number of feature-specific cards, and at least one hard drive that is inside a metal housing. Typical peripherals include a keyboard, mouse, monitor, and printer. The size and relatively low cost of desktops make computer applications and Internet access available to home and small business owners. Compared to laptops, larger desktop machines allow users to more easily upgrade the devices with larger, cheaper components. Although desktops have a number of advantages over laptops, the devices are often large and not easily moved between locations. Many desktopcomputers also require an external monitor and input devices, although some all-in-ones integrate these peripherals. There are many different types of desktopcomputers. Learn about PCs, supercomputers, printable PCs, and more. Ad Ad Ad Ad By Elvis Michael Your Windows desktop is an integral part of the operating system, because it is widely displayed when your computer is idle. Adding wallpaper is a method of impersonating your Windows profile; wallpaper acts as a user-friendly and accessible function. If your wallpaper was changed accidentally or without your consent, you can download it using Windows 7's Personalization options. To access Control Panel, click the Start menu in the lower-left corner of the screen. Click the Look and Personalization link followed by Personalization. Select the Desktop Background option. Choose the wallpaper you want to apply to your desk. If the desired image isn't available from the list, click Browse and locate it from its destination source. Once you've found it, click Open to add it to the list of available images. Use the How to position the image at the bottom of the screen to place the wallpaper. For example, this option allows you to center the wallpaper, present it as tile or stretch it to fit your computer screen. Click OK to apply the wallpaper you want to apply to your Windows desktop. Read more See more See more See more See more In a new world of quarantine and social rejection, work from home has become the new norm for many. And having a good setting and working environment at home can make all the difference when it comes to a productive working day. One way to achieve this is by investing in a good desktop computer. Consumer Reports rounded up 20 of the best desktops on the market, so we turned to two experts on what you should know about these highly recommended options. Whether you're looking for an all-in-one desktop or a tower desktop, we're forced to have at least one option to meet your needs. If you are looking for something specific and want to shop this article by category, simply click on each link below:All-in-One desktopBest desktopsAdd desktops1. Apple 21.5-inch iMac ComputerIf you want a stylish, easy-to-use pc, the Apple iMac is a fixed option. This is a beautiful all in a PC, and by far one of the best desktops today for general-purpose home users, said Kenneth Hale, co-owner of IT Group Technology Advisory. The 5k screen is stunning and supports up to 1 billion colors. For streaming movies, browsing, photos and other general use apple iMac can not be defeated. This all-in-one computer packs all its hardware into the screen itself, so you don't need a big tower on your desktop, added Whitson Gordon, a tech writer with over a decade of experience. They are a bit more expensive for the performance you get, but for many it is well worth it. 2. Dell Inspiron 27 All-in-OneThis Dell all-in-one desktop is comparable to iMac but slightly cheaper. This is a good choice for someone who doesn't want to spend additional money on an iMac, Hale noted. It's a decent computer in a brown paper bag. Its chassis design is passable, and the hardware specifications are good for your everyday computers. The Dell Inspiron is a great way to save space on your desktop if you don't have room for a desktop tower, Gordon added. It's also much less money than a comparable iMac, if Apple's offerings cost too much for your taste. 3. HP Envy Curved All-in-One Desktop If you are not interested in using multiple monitors but want the extra screen space, this is a match made in the sky. The HP Curved Envy is both beautiful in design and immersive because of the 34-inch curved display, Hale said. Working on larger screens for many hours makes a world of difference in both productivity and ergonomics. Ultrawide monitors, like the one on HP's Envy Curved All-in-One, are amazing, Gordon says. You get a lot more real estate on the screen to put multiple windows side by side, which is great for getting work done. On top of that, HP offers some solid configurations with great performance. 4. Microsoft Surface StudioThis is by far the most expensive on the list but Gordon says it's worth the upgrade if you're doing graphic design and illustrations. An all-in-one similar to iMac or HP Envy, but aimed directly at artists and kreal, says Gordon. With a wonderful touchscreen that folds down horizontally, you can use your Surface Pen or Surface Dial for art and design in a way that few desktops can match. It's more expensive than most, but it's also incredibly unique and has great performance to boot. 1. HP ProDesk G5The HP ProDesk GF is perfect for those who use a lot of different programs or programs, hale says. For the office and remote workers, I highly recommend the HPProDesk G5, he says. having a solid-state drive, the HP Pro Desktop will fly you through Microsoft Office documents and websites in a flash. It is as small as a box of tissues, quiet, and divides minimal heat, all at a budget-friendly price. 2. Apple Mac MiniThe Apple Mac Mini is a great way to get the support of a desktop computer without shelling out a ton of money and saving some extra desktop space. If you're on more of a budget, the Mac Mini is a good option, but you have to give your own mouse, keyboard and monitor, Gordon said. Mac Mini by Apple is iconic in its design. Small, fast, and starting at \$699, it provides everything the user needs who prefers Apple macOS to work and play in, Hale added.1. Dell XPS TowerIf you want more computer storage and room at your desk, a desktop tower computer can be a good choice for you. This desk is definitely not the most beautiful of gangs. But the Dell XPS Tower packs enough horsepower for the user in temporary gaming and creative work, hale says. You get a strong system with enough space to expand (hardware) with its extensive fall for years to come. 2. HP Omen Obelisk DesktopThe HP Omen Obelisk Desktop is perfect if you like to play video games. You'll have more than enough room for all your favorite games and plenty more room for all your important documents and photos. The design of the case looks like it was left behind by an alien mothership, Hale said. The HP Omen will give you out of this world gaming performance with plenty of space to expand. It will get you through all the new games with ease. There are lots of desktops on the market focused on gaming, but HP has one of the premier with its omen line of products, Added Gordon. The HP Omen Obelisk packs a lot of performance into a decent-sized case, with customizable RGB lighting and a transparent side panel. The interior uses a tool-free design, allowing you to easily upgrade your parts along the way.
